

SV100 GNSS Receiver User Manual

Introduction

Thank you for choosing the SV100 GNSS receiver. This Getting Started Guide will provide useful information about SV100. It will also guide you through your first step of using SV100 GNSS receiver.

Proprietary Notice

Information in this document is subject to change without notice and does not represent a commitment on the part of SingularXYZ Intelligent Technology Ltd. The software described in this document is furnished under a license agreement or non-disclosure agreement. The software may be used or copied only in accordance with the terms of the agreement. It is against the law to copy the software on any medium except as specifically allowed in the license or non-disclosure agreement.

No part of this manual may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, for any purpose without the express written permission of a duly authorized representative of SingularXYZ Intelligent Technology Ltd.

Safety Information

Before using the receiver, please make sure that you have read and understood this user manual, as well as the safety requirements.

If you buy a SV100 that including built-in internal Lithium battery (not standard), and a damaged battery can cause personal injury or property damage. Please obey the following regulations:

-Be sure that power off SV100 when delivering

-Do not put the battery in water

-Do not use the damaged battery

-Do not expose the battery to fire or high temperature

-Internal battery can be bought or replaced only at Authorized SingularXYZ distributors.

Warning and Cautions

An absence of specific alerts does not mean that there are no safety risks involved. A Warning or Caution information is intended to minimize the risk of personal injury and/or damage to the equipment.

WARNING-A Warning alerts you to a potential misused or wrong setting of the equipment.

CAUTION- A Caution alerts you to a possible risk of serious injury to your person or damage to the equipment.

Use and Care SV100 GNSS Receiver User Manual The SV100 is designed to with stand the rough environment that typically occurs in the field. However, the SV100 is high-precision electronic equipment and should be treated with reasonable care.

Content

1. Introduction

SV100 is an excellent GNSS receiver, which is designed as a multi-purpose GNSS receiver for a wide range of applications. This chapter will introduce the main features, accessories, appearance, panel, connectors etc.

1.1 SV100 Features

Full Constellation

SV100 is equipped with a high-precision GNSS engine for simultaneously tracking GPS, BDS, GLONASS, Galileo & QZSS. Embedded with multi-frequency anti-jamming technology, SV100 offers high quality and stable GNSS data.

Flexible Configuration

For professional users of reference stations, you can login in the web UI accessed via Ethernet/ WiFi, containing device information , configuration, work management and update. For field users of portable base stations, SingularXYZ also provides an android app connected via Bluetooth, offering smooth and powerful functions in need.

24/7Continuous Operation

Except for the external power supply, SV100 is also optional for a 6600mAh battery to avoid sudden power failure or voltage instability. With a 4G network as the backup for Ethernet, and an MTBF of over 20,000 hours, SV100 guarantees your ultra-stable continuous reference station.

Corrections Transmission

When broadcasting correction data as a portable base, users can select to insert the SIM card to transmit via 4G, or connect the UHF antenna to transmit via radio. SV100 supports multiple radio protocols to compatible with your RTK receivers, such as TRIMATLK, TRANSEOT, SATEL, TRIMMARK3, etc.

Rugger Housing

The SV100 is protected with magnesium aluminum alloy housing and compact structure to avoid accidental drop damage. IP67 waterproof and dust proof design, it is suitable for outdoor work in all kinds of weather.

Benefit from its powerful abilities, the SV100 can play a important role in positioning

infrastructure, active geodetic network, machine guidance, harbor construction, land surveying, marine surveying or any project that accuracy and reliability matter the most.

1.2 Accessories

For different needs of customers, we can provide different antennas.

Accessories

Accessories	Accessories picture
SV100	Support to
Data cable

4G antenna	
Charger	
LAN cable	

Antenna

Antenna type	Antenna picture
SA100 geodetic GNSS antenna	• 100
SA500 choke ring antenna	
SA550 3D choke ring antenna	

Panel

There are 4 LED indicators in front panel, different colors and flash frequency show you the work status of SV100 directly.

① Power indicator: It turns red every time when power on, it means it turn on normally, green meas it is in charging.

② Satellite indicator: Blue, if your receive N satellites' signal, it flashes N times every 5 seconds, N is the number of tracked satellites

3 Data indicator: Green, when set up as base station or rover, it flashes when transmit or receive data

4 Network indicator: Yellow, if you insert a SIM card, the indicator always on when get internet. Not for LAN.

1.3 **Connectors**

All connectors are located on the front of the receiver, you can connect other external cables through these connectors.

- ① Master GNSS Antenna Connector: Connect to the GNSS antenna for position.
- ② Slave GNSS Antenna Connector: Connect to the GNSS antenna for heading.
- ③ Radio antenna connector: Connect to radio antenna.
- ④ 4G antenna connector: Connect to 4G antenna.

⁽⁵⁾ Power cable connector: Port for external power supply, and internal battery charging of the receiver, this connector can connect to the serial port to send commands and download static data through power cable.

- 6 Ethernet Port: Connect to LAN.
- \bigcirc SIM card slot: Install SIM card.

1.4 **SV100 connection view**

SV100 is mainly used as a base station or CORS reference station, the below figure explains the connection of each equipment.

As a base station to broadcast correction data in a short time, it is easy to use. You just need to prepare GNSS antenna, radio antenna, power supply, tripod, etc.

AS a CORS reference, it is more complicated to install, which usually broadcast correction data unremittingly in a long time through internet. there are indoors part and outdoors part. Outdoors ports include GNSS antenna, lightning rod, solar energy, cement pier, etc. Indoors ports include SV100, router, UPS(uninterrupted power supply), server, etc.

The GNSS antenna and lighting rod are fixed on the ground or top of building, inner devices including the SV100, the power supply and internet, are settled in the office.

Chapter 2 Connection

For ease of configuration, SV100 has an advanced built-in web server, you can access the

web setting page and do configurations remotely. This section describes how to change receiver's settings through a web server.

2. Connection

There are two ways for you to login the web page to configure the receiver when you get it firstly.

2.1 WIFI connection

When the device is powered on, the WiFi of the device is enabled by default. You can visit the configuration through WIFI without any cable.

Workflow:

① Connect your computer to the WIFI of the device

WIFI Name: the SN number of your device

- WIFI Password: 12345678
- ② Then type IP in browser, IP: 192.168.10.12

Username: admin

Password: admin

And you can login the configuration page. After accessing the main page, configuration menus are listed on the left, and receiver's settings on the right. Each configuration menu will be demonstrated in the following sections.

SingularXYZ	Position Information	mation				SN:1422F0002	English \sim	Logout
Bevice Information ~	Coordinates							
② Device Configuration \lor	Latitude:	31.16653364000	Longitude:	121.28987133000				
	Height	33.4856	Ellipsoid:	WGS84				
B Work Management V	Positioning Status:	FIXEDPOS						
Firmware								
	GPS Week:	2226	GPS Second:	178593.000				
	UTC:	013615.00	Local Time:	2022/9/6 1:36:15				
	Satellites							
	Satellites		PRN		Number			
	GPS		2,5,6,9,11,12,13,17,19	,20,25				
	GLONASS		41,42,43,44,48,56,5	7,58				
	GALILEO		73,77,78,83,85,91,9	6,97				
	BDS	141,142,143,144,145,147,148,	150,153,156,167,168,1	70,172,178,179,180,181,196,199,200				
	QZSS		132,133,134,137					

2. 2 Ethernet network connection

If the WIFI were closed, you can login through network cable.

Workflow:

① The SV100 receiver can connect to an Ethernet network through its Ethernet port.

② Making sure that the SV100 and your computer are within the same Local Area Network. The default IP of SV100 is 192.168.1.1. Then change your computer 's IP address. For example IP address on your computer:

Use the following IP address (5):
IP address (D:	192. 168. 1. 11
Subnet Mask (U):	255. 255. 255. 0
Default Gateway (D):	192, 168. 1

③ Then type IP in browser, IP: 192.168.1.1, username and password are admin, login the configuration page. Then you can check status and configuration of the receiver.

Chapter 3	Receiver Status
	Receiver Otatus

3. Receiver Status

Click Device Information, you can choose and check the corresponding receiver status, including Version Information, Satellite List, Satellite Sky Plot, Position Information and

Status Information.

3.1 Version Information

Version information includes some basic information of the receiver, such as SN number, hardware version, firmware version, GNSS version etc.

Singular XYZ	Version Information		SN:1422F0002	English \vee	Logout
Device Information ^					
Version Information	Device Model:	SV100

4.6 **DDNS config**

Start up or shut off DDNS, it supports No-IP, DynDNS, FreeDNS, Zoneedit.

Registered address:

https://www.noip.com

http://www.dyndns.com

https://freedns.afraid.org

https://www.zoneedit.com

The DDNS (Dynamic Domain Name Server) system maps the dynamic IP address of a user to a fixed domain name resolution service. Every time a user connects to the network, the client program sends the dynamic IP address of the host to the server program located on the service provider's host through information transmission, realizing dynamic domain name resolution

Preparation: SV100, a fixed domain name, router with internet, network cable and computer.

• Connect SV100 to router through network cable

• Connect your computer to the WIFI of the SV100 GNSS receiver. Login the web of SV100. Set IP address to the same network segment as the router.

For example, the IP of the router is 192.168.31.1, the static IP of SV100 should be 192.168.31.*

• Connect your computer to the WIFI of the router and login it's web, map an external port of the router to port 80 of the receiver IP address

Creating a	port forwarding rule	×
SingularXYZ	Name

Start up or shut off NAT_DDNS, supporting NATAPP and NGROK.

Registered address:

https://natapp.cn

https://ngrok.com

NAT-DDNS (Network Address Translation- Dynamic Domain Name Server) technology enables users to realize dynamic domain name resolution service even in the Intranet IP address environment. Dynamic IP addresses communicate with the server in real time,

bind fixed domain names, and enable Internet users to access a certain Intranet host by entering a specific domain name. It is easy to set up WEB/MAIL/FTP servers on their own hosts. Can also achieve remote management, remote access and other functions.

Preparation: SV100, a fixed domain name, internet, computer

• Insert a SIM card or connect SV100 to router through network cable, making sure it get internet.

• Login the web of SV100. Enter domain name and authtoken code and click startup

Work flow:

- Set SV100 as base or rover in working mode interface
- Choose work mode, TCP client or server
- Enter IP and port
- Choose the data type and specific data

- Check startup
- Click OK.

When it turns green, it means the mode is working.

5.3 **Ntrip transmission**

The SV100 can support Ntrip Client, Ntrip Server and Ntrip Caster protocols.

Ntrip clinet: You can acquire correction data from CORS through Ntrip Client protocol if setting the receiver as a rover.

Ntrip server: As a base station, you can broadcast correction data by using Ntrip Server protocol or the data forward software (supporting Ntrip Caster protocol) running in the server. If you have a static IP address, you can use Ntrip Server and Ntrip Caster of SV100 simultaneously to create a single reference station. This mode does not need any software to support, and is very convenient for using

5. 3. 1 Ntrip Client

You can acquire correction data from CORS through Ntrip Client protocol if setting the receiver as a rover.

• Before setting the Ntrip Client, you should configure the receiver as Rover mode.

Singular XYZ	. ■ Working Mode

5. 3. 3 Ntrip Caster

SV100 can also work as a single reference station and send correction data through Ntrip Caster protocol. You need to configure both Ntrip Server and Ntrip Caster when you use this protocol. The setting is shown below:

Configuration of Ntrip Server:

• Set the Ntrip Server address and Nrtip Server port; this IP address is 127.0.0.1, port is 25001.

- Enter custom username and password
- Enter mount point
- Enable startup button of Ntrip Server , Press OK to save the configuration

NTRIP Server							
Status:	Disconnected	d					
Startup:							
Caster Address:	127.0.0.1		Port:	25001			
User:	123						
Password:							
Mount Point:	1323R000	5]				
Diff Data:	1005B	on \sim	1006B	OFF	··· 10198	B OFF	~
RTCM32 V	1020B	OFF \vee	1033B	ON	···· 10428	B OFF	\sim
	1045B	OFF \vee	1046B	OFF	√ 10748	B ON	\sim
	1084B	on \vee	1094B	ON	 ✓ 11248 	3 ON	~
	1230B	OFF 🗸					
		ОК		Cancel			

Configuration of Ntrip Caster:

- Enter port, this port should be same with Ntrip Server
- Enter Password, this password should be also same with Ntrip Server
- Enable startup button of Ntrip Caster, press OK to save configuration

NTRIP Cas	ster
Status:	Disconnected
Startup:	
Port:	25001
User:	123
Password:	
	OK Cancel

• Finally set up port 25001 in the router for forwarding

All configurations of Ntrip Caster Protocol are shown above, then you can use a rover to get correction data.

5.4 **Radio transmission**

5. 4. 1 Base radio transmission

SV100 also supports to transmit or receive data.

- Set SV100 as Base station
- Choose mode as transmit
- Choose protocol, channel and diff data type, the frequency of channel 0 is editable.

Channel	transmitting frequency	receiving frequency
0	454.050	454.050
1	455.050	455.050
2	456.050	456.050
3	457.050	457.050
4	458.050	458.050
5	459.050	459.050
6	460.050	460.050
7	461.050	461.050
8	462.050	462.050
9	463.050	463.050

- Set power, low power or high power, power is higher ,the server range is bigger
- Check startup and click OK

Radio										
Startup:

5. 6. 2 Radio RTK Bridge

This function is prepared for the customer who only have one CORS account but need to work with several rovers. The base station work as a repeater, receiving correction data from CORS, then broadcasting data by radio.

5. 5 Data Recording

Data record menu is designed to set the storage mode for static date, the internal memory is 8 GB, 1 Hz sample frequency could be used for 1 month record.

SingularXYZ	⊡ Data Re	ecording					
Device Information ~	Data Rec						
\odot Device Configuration \vee	Storage	Location	Total Capacity	,	Fre	e Capacity	Format Memory
Work Management ^	Internal	Storage	7440M			5924M	Format Memory
Data Transmission	Number	Record Name	Record Status	File F	ormat	Record Mode	Operation
Data Recording		record1	Not Recording	x	γz	Manual	Config
File Download		record2	Not Recording	RINE	X3.02	Manual	Config

In this page, you can know how much free memory is left to use, configure the record setting, also you can format the memory in need.

CAUTION - Please be careful to click the Format Disk button. It will empty all your data files in SV100.

Static data record workflow:

- Click Config button to configure the data recording settings
- Record Name: Support only number or letter
- Data Interval: Choose sample frequency, support0.05\0.1\0.2\1\5\10\60 S.

• File Interval: Choose file Interval, support every 15 minutes or $1\2\4\24$ hours to save a file. If you select 24 as file split, it will create two data files when it occurs to 24 o'clock (UTC Time). One is from start time to 24 o'clock, another is from 0 o'clock to end time.

- File Format: Support XYZ\ Rinex3.02\ Rinex3.04.
- Loop Recording: When storage is full, Yes means delete earliest data and store

continually, No means stop recording

- Storage Space: Separate storage space in internal memory
- Record Mode: Support manual and automatic recording mode.

Record Settin	ıgs
Record Status:	Not Recording
Record Name:	record1
Data Interval:	1s V
File Interval:	Th v
File Format:	XYZ V
Loop Recording	Yes No
Storage Capacity	3000
Record Mode	Manual
	Start Recording Cancel

5.6 **File Download**

5.6.1 Web Download

After data recording, the data will be recorded in the internal memory, it is convenient to SV100 GNSS Receiver User Manual 28

download the data through WIFI

When the DDNS or NAT-DDNS mode is on, you can download it remotely

The download function works as a search interface for searching and downloading the data.

Singular XYZ	Ξ File Download				English 简体中文 Logout
